Maintenance Checklist for the Kalamazoo DS10 10 Inch Industrial Disc Sander

Daily Inspection:

- Ensure the disc sander is powered off and unplugged before inspection.
- Check for any visible wear or damage to the sanding disc.
- Inspect the power cord for any signs of damage or fraying.

Weekly Maintenance:

- Thoroughly clean the sanding disc and machine to remove dust and debris buildup.
- Inspect the on/off toggle switch to ensure it operates smoothly and safely.
- Tighten all accessible bolts and screws on the frame and motor housing to prevent loosening from vibrations.

Monthly Maintenance:

- Replace the sanding disc if it shows signs of significant wear, is uneven, or loses efficiency.
- Check motor wiring for any wear or loose connections.

Quarterly Maintenance:

- Inspect the motor for dust and debris buildup and clean it if necessary to prevent overheating.
- Verify alignment of the disc with the worktable to ensure precision sanding.
- Perform a full machine check to ensure all mechanical and electrical components are functioning properly.
