Power, Precision, Throughput: DS24H 24-Inch Horizontal Disc Sander

In today's competitive world of machining and fabrication, shop owners need equipment that can keep up with the demands of precision, speed, and versatility. The DS24H 24-inch Horizontal Disc Sander delivers all of this and more. Built for heavy-duty use, this machine is a staple in workshops, machine shops, and metal casting foundries where quality and repeatability matter most.

Applications Across Industries

The DS24H isn't just another sander—it's a production tool trusted across industries. Machine shops use it to finish machined parts and square edges with accuracy. Cabinet makers rely on it to create seamless fits for custom cabinets. Metal casting foundries turn to the DS24H for cleaning and finishing castings before secondary machining. Its versatility makes it an essential piece of equipment for any serious shop.

Why It Stands Out

With a 24" sanding surface, the DS24H offers more working area than traditional sanders. Its heavy-duty construction ensures years of reliable operation, even in demanding shop environments. From deburring and beveling to truing and flattening, it provides consistent results across metals, woods, plastics, and composites. This is not just a machine—it's a productivity upgrade.

Key Highlights for Shop Owners

- Large 24" horizontal disc for sanding larger workpieces
- Precision finish for machined parts, plates, and fixtures
- Trusted by cabinet makers for panels and custom cabinets
- Foundry-ready for cleaning and dressing castings
- Rugged build for continuous use in busy machine shops
