

Equipment Spotlight: The Kalamazoo S272 The Belt Grinder Built for Serious Fabrication

In today's fabrication shops, efficiency, versatility, and reliability aren't optional—they're essential. The Kalamazoo Industries S272 2" x 72" Industrial Multi-Purpose Belt Grinder stands out as one of the most dependable grinding solutions on the market, engineered with the durability and performance that metalworkers, fabricators, and blacksmiths expect from American-built machinery.

Whether you're shaping, deburring, removing welds, or prepping steel for fabrication, the S272 delivers consistent results day after day. Built around a powerful industrial motor and supported by Kalamazoo's decades of manufacturing expertise, this grinder is designed for shops that demand equipment that works as hard as they do.

Engineered for the Demands of Modern Fabrication

The S272 isn't just versatile—it's purpose-built for the realities of production grinding. Its open-frame design and interchangeable attachments make it easy to switch between operations, saving time on the shop floor. From contouring and beveling to heavy stock removal and precision finishing, the S272 adapts to nearly any grinding workflow.

Key Advantages Include:

- Rugged 2" x 72" belt size that delivers long life and smooth, consistent cutting performance
- Multiple work configurations including platen, contact wheel, and slack belt grinding
- Strong, industrial-duty motor sized for serious daily use
- Fast belt changes for reducing downtime during job changeovers
- Compact footprint ideal for fabrication shops, tool rooms, and production environments
- Available S272V model includes an integrated vacuum base for cleaner, safer grinding environments

Performance That Pays Off

Fabricators know that reliable grinding equipment directly impacts quality and turnaround time. The S272 is designed to maintain accuracy and belt tracking even under continuous use—meaning better finishes, less rework, and fewer delays.

Built in the USA for the People Who Build America

Kalamazoo Industries continues its tradition of manufacturing heavy-duty, American-made grinding tools that fabricators trust. The S272 is proudly built in Michigan with replaceable parts, strong service support, and the rugged engineering the industry demands.

Ready to Upgrade Your Grinding Performance?

Fabrication shops looking to increase speed, improve finishing quality, and eliminate downtime will find the S272 to be the grinder that outperforms expectations.

- **Proudly built to last. Proudly built in USA**

This machine excels in:

- Welding cleanup and blending
- Beveling plate and tube
- Sharpening tooling and fixtures
- Metal prep and finishing
- Blacksmithing and knife shaping
- Precision or heavy-duty grinding applications

With its durable construction and flexible attachments, the S272 becomes a long-term investment that continues to pay dividends in productivity.
